## ENERGY SAVING TIPS FOR EFFECTIVE UTILIZATION OF AIR-CONDITIONING

Changing the thermostat setting to 24°C when in use & save energy

Ensure all your doors & windows are sealed & closed properly. Humidity penetration to your premise will increase your energy consumption

Avoid running of extract fans 24 hours

Increase your thermostat set point while you are away & save energy

Ensure quality, calibration & accuracy of the thermostats

Turning off lights when not in use & reduce heat load

Clean & replace air filters in FCU's & AHU's regularly for better cooling results

Clean cooling coils annualy by washing cooling coil fins in order to increase heat transfer efficiency
